Chapter 1 • Introduction

1.1 A gas at 20°C may be *rarefied* if it contains less than 10^{12} molecules per mm^3 . If Avogadro's number is 6.023×10^{23} molecules per mole, what air pressure does this represent?

Solution: The mass of one molecule of air may be computed as

$$m = \frac{\text{Molecular weight}}{\text{Avogadro's number}} = \frac{28.97 \text{ mol}^{-1}}{6.023 \times 10^{23} \text{ molecules/g} \cdot \text{mol}} = 4.81 \times 10^{-23} \text{ g}$$

Then the density of air containing 10^{12} molecules per mm^3 is, in SI units,

$$\begin{aligned} \rho &= \left(10^{12} \frac{\text{molecules}}{\text{mm}^3} \right) \left(4.81 \times 10^{-23} \frac{\text{g}}{\text{molecule}} \right) \\ &= 4.81 \times 10^{-11} \frac{\text{g}}{\text{mm}^3} = 4.81 \times 10^{-5} \frac{\text{kg}}{\text{m}^3} \end{aligned}$$

Finally, from the perfect gas law, Eq. (1.13), at 20°C = 293 K, we obtain the pressure:

$$p = \rho RT = \left(4.81 \times 10^{-5} \frac{\text{kg}}{\text{m}^3} \right) \left(287 \frac{\text{m}^2}{\text{s}^2 \cdot \text{K}} \right) (293 \text{ K}) = \mathbf{4.0 \text{ Pa}} \quad \text{Ans.}$$

1.2 The earth's atmosphere can be modeled as a uniform layer of air of thickness 20 km and average density 0.6 kg/m^3 (see Table A-6). Use these values to estimate the total mass and total number of molecules of air in the entire atmosphere of the earth.

Solution: Let R_e be the earth's radius = 6377 km. Then the total mass of air in the atmosphere is

$$\begin{aligned} m_a &= \int \rho \, d\text{Vol} = \rho_{\text{avg}} (\text{Air Vol}) = \rho_{\text{avg}} 4\pi R_e^2 (\text{Air thickness}) \\ &= (0.6 \text{ kg/m}^3) 4\pi (6.377 \times 10^6 \text{ m})^2 (20 \times 10^3 \text{ m}) = \mathbf{6.1 \times 10^{18} \text{ kg}} \quad \text{Ans.} \end{aligned}$$

Dividing by the mass of one molecule = 4.8×10^{-23} g (see Prob. 1.1 above), we obtain the total number of molecules in the earth's atmosphere:

$$N_{\text{molecules}} = \frac{m(\text{atmosphere})}{m(\text{one molecule})} = \frac{6.1 \times 10^{18} \text{ grams}}{4.8 \times 10^{-23} \text{ gm/molecule}} = \mathbf{1.3 \times 10^{44} \text{ molecules}} \quad \text{Ans.}$$

Main steps of the video-signal processing for heart rate (HR) estimation. Neurophysiological Responses to Different Product Experiences. The remote EBR monitoring by means of facial video analysis was explored in recent works too. [Google Scholar] [CrossRef] [PubMed]Goovaerts, H.G.; Ros, H.H.; van den Akker, T.J.; Schneider, H. The study protocol received the favorable opinion from and has been approved by the Ethical Committee of the Sapienza University of Rome (protocol n. Non-Contact Physiological Parameters Extraction Using Facial Video Considering Illumination, Motion, Movement and Vibration. Afterwards, they had to choose the most important factor along pairwise comparisons [39]. Classification of imbalanced ECG beats using re-sampling techniques and AdaBoost ensemble classifier. Process. Health 2015, 21, 321–354. During the baseline (1 min duration), the same 21 uppercase letters was presented to the participants with no interaction required. The Doctor Game (DG). 2009, 10, 1755–1758. Regarding the NB task, the paired Wilcoxon signed-rank test performed on the normalized EBR and HR estimations provided by the video-based technique (Figure 8) showed a significant difference between the nominal and non-nominal conditions (EBR: $p = 0.0003$; HR: $p = 0.02$). The present study aimed at investigating the reliability of an innovative video-based technique in estimating neurophysiological parameters (i.e., EBR and HR) while dealing with different activities to find out if it could be a potential solution for healthcare telemonitoring of patients. Immunol. [Google Scholar] [CrossRef] [PubMed]Butmee, T.; Lansdown, T.C.; Walker, G.H. Mental Workload and Performance Measurements in Driving Task: A Review Literature. Eng. Inform. The Shapiro-Wilk test was performed to determine the normality of each distribution involved in the analyses. * indicates a statistical difference between the represented parameters. Here too, the EBR parameter was computed as the mean of the total number of blinks in every condition per minute. [Google Scholar] [CrossRef] [PubMed]Kostashanos/Drowsiness-Detection: Real Time Drowsiness Detection (Blinks or Yawns) with OpenCV Using Facial Landmarks. Psychol. In all conditions, 21 uppercase letters were used, which were displayed for 500 ms and an inter-stimulus interval randomized between 500 to 3000 ms; 33% of the displayed letters were target.
